

PURE WATER SERVICES

ABOUT US

SIGNIFICANT PURE WATER EXPERIENCE

Auburn has been providing the Puget Sound region with pure water services for over a decade. We specialize in providing solutions for many institutions, including the pharmaceutical and life sciences, government, industrial, food and beverage, and microelectronics industries.

TEAM WITH DEEP HISTORY

With over 50 years of combined pure water experience, our team brings together experts who will perform as one; delivering expertise in design, coordination, installation, and ongoing maintenance. Led by industry veterans, our team understands the unique needs of customers, ensuring they will receive the same high level of professional service.

LOCAL BUSINESS WITH ROOTS IN THE PUGET SOUND REGION

Auburn's area of work is concentrated around the Pacific Northwest, and our workforce is primarily located in King County. That means you can rely on our Service team to provide an agile response, 24/7. Our team members are empowered to make decisions in the best interest of our clients, without having to navigate management from afar.

WOMEN-OWNED CERTIFIED BUSINESS

As a women-and-family operated business, we understand first-hand the important role larger companies and institutions play in helping smaller organizations to succeed. While Auburn's will help the clients exceed its MWBE goals, we will also look for opportunities to increase participation through our own vendors and subcontractors.
